

USING LANDSCAPE photography to reflect on broader notions of culture, the passage of time, and the construction of perception, photographers Mark Klett and Byron Wolfe spent five years exploring the Grand Canyon for their most recent project, *Reconstructing the View*. The team's landscape photographs are based on the practice of rephotography, in which they identify sites of historic photographs and make new photographs of those precise locations. Here, Klett and Wolfe expand upon that concept, referencing a wealth of images of the canyon, ranging from historical photographs and drawings by William Bell and William Henry Holmes, to well-known artworks by Edward Weston and Ansel Adams, and from souvenir postcards to contemporary digital images drawn from Flickr. The pair then employed digital postproduction methods to bring the original images into dialogue with their own. The result is this stunning volume, illustrated with a wealth of full-color illustrations that attest to the role photographers—both anonymous and great—have played in picturing this most iconic of American places.

Rebecca A. Senf's compelling essay traces the photographers' process and methodology, conveying the complexity of their collaboration. Stephen J. Pyne provides a conceptual framework for understanding the history of the canyon, offering an overview of its discovery by Europeans and its subsequent treatment in writing, photography, and graphic arts.

INSET: Klett and Wolfe, 2009. *Standing on the edge of Dutton Point*. Dimensions of each overlay image: 4.5" x 3.5"

MEDIUM: Digital inkjet print. Stereo pair made for Sokkia/Lietz stereo viewer

DIMENSIONS: 8.5"h x 18"w

RECONSTRUCTING THE VIEW: *The Grand Canyon Photographs of Mark Klett and Byron Wolfe* features the most recent completed project of the collaborative photographers Mark Klett and Byron Wolfe, and it explores anew a frequently depicted subject: the Grand Canyon. The Grand Canyon has been a major subject for artists since the middle of the nineteenth century. Phoenix Art Museum owns paintings of the Grand Canyon by Thomas Moran, Gunnar Widforss, Edward Potthast, Tony Foster, and others, in a range of styles. During this same period major photographers from Timothy O'Sullivan and J. K. Hillers to Ansel Adams and Edward Weston have explored the canyon's sublime nature. Klett and Wolfe build on that tradition in unexpected ways, revealing their perspectives on this natural wonder by merging cutting-edge photographic technology with historic images spanning nearly 150 years.

The exhibition includes photographs and videos produced by Klett and Wolfe over a five-year period, beginning in 2007 and continuing through 2011. Much as they did in their earlier projects, the pair approached the Grand Canyon with historic images they located and rephotographed. But in this project they departed from

earlier practice by incorporating a wide range of source material, including drawings and photographs, ranging from those made on nineteenth-century governmental surveys to those made for art or commercial purposes. These original pictures—such as William Henry Holmes's drawing of Point Sublime or Ansel Adams' numerous Canyon views made for the National Park Service in 1941—are treated with wonderfully diverse methods. The exhibition combines so many threads—technology, science, geography, humor, sociology, photographic and landscape history, and digital and traditional photographic processes—that when it was on view at Phoenix Art Museum, the gallery was lively with conversing visitors engaging with the large-scale photographs.

This book expands upon the 2009 exhibition with two key contributions. One is Dr. Rebecca Senf's essay, born of her direct experience with the photographers on one of their trips into the field, giving readers the sense they, too, are sitting alongside the artists. Senf, who beautifully curated the exhibition, uses this detailed explanation of the process and methods to explain the fascinating journey Mark Klett and Byron Wolfe take with each unique piece.

The second addition is a short essay by MacArthur award-winning historian Stephen J. Pyne, on the history of the canyon. It provides a useful cultural and historical anchor, treating the Grand Canyon as more than a geographic and geologic site.

It has been a pleasure to work with Mark Klett and Byron Wolfe; they are affable and intense, playful and professional, and above all, passionate about their art making. We were honored to be the first institution to show their work from the Grand Canyon, and we are honored to share the work more widely in this book.

JAMES K. BALLINGER
THE SYBIL HARRINGTON DIRECTOR
PHOENIX ART MUSEUM

THE CENTER FOR CREATIVE PHOTOGRAPHY at the University of Arizona is the world's largest archive and research center for the study and appreciation of modern American photography. The Center's collections—which include 100,000 photographs by over 2,000 artists; 5 million photographic archive objects (negatives, contact sheets, manuscripts, correspondence, and other documentation); oral history and other media materials; and a library of rare books, journals, artists' books, and exhibition catalogs—reach an international audience through an active exhibition and loan program. Some of the explicit goals of the Center are to promote the exploration of photography, especially in its relationship to contemporary society, to advocate freedom of expression, to encourage open-minded

inquiry and collaboration, and to support the creation of new knowledge about the photographic medium.

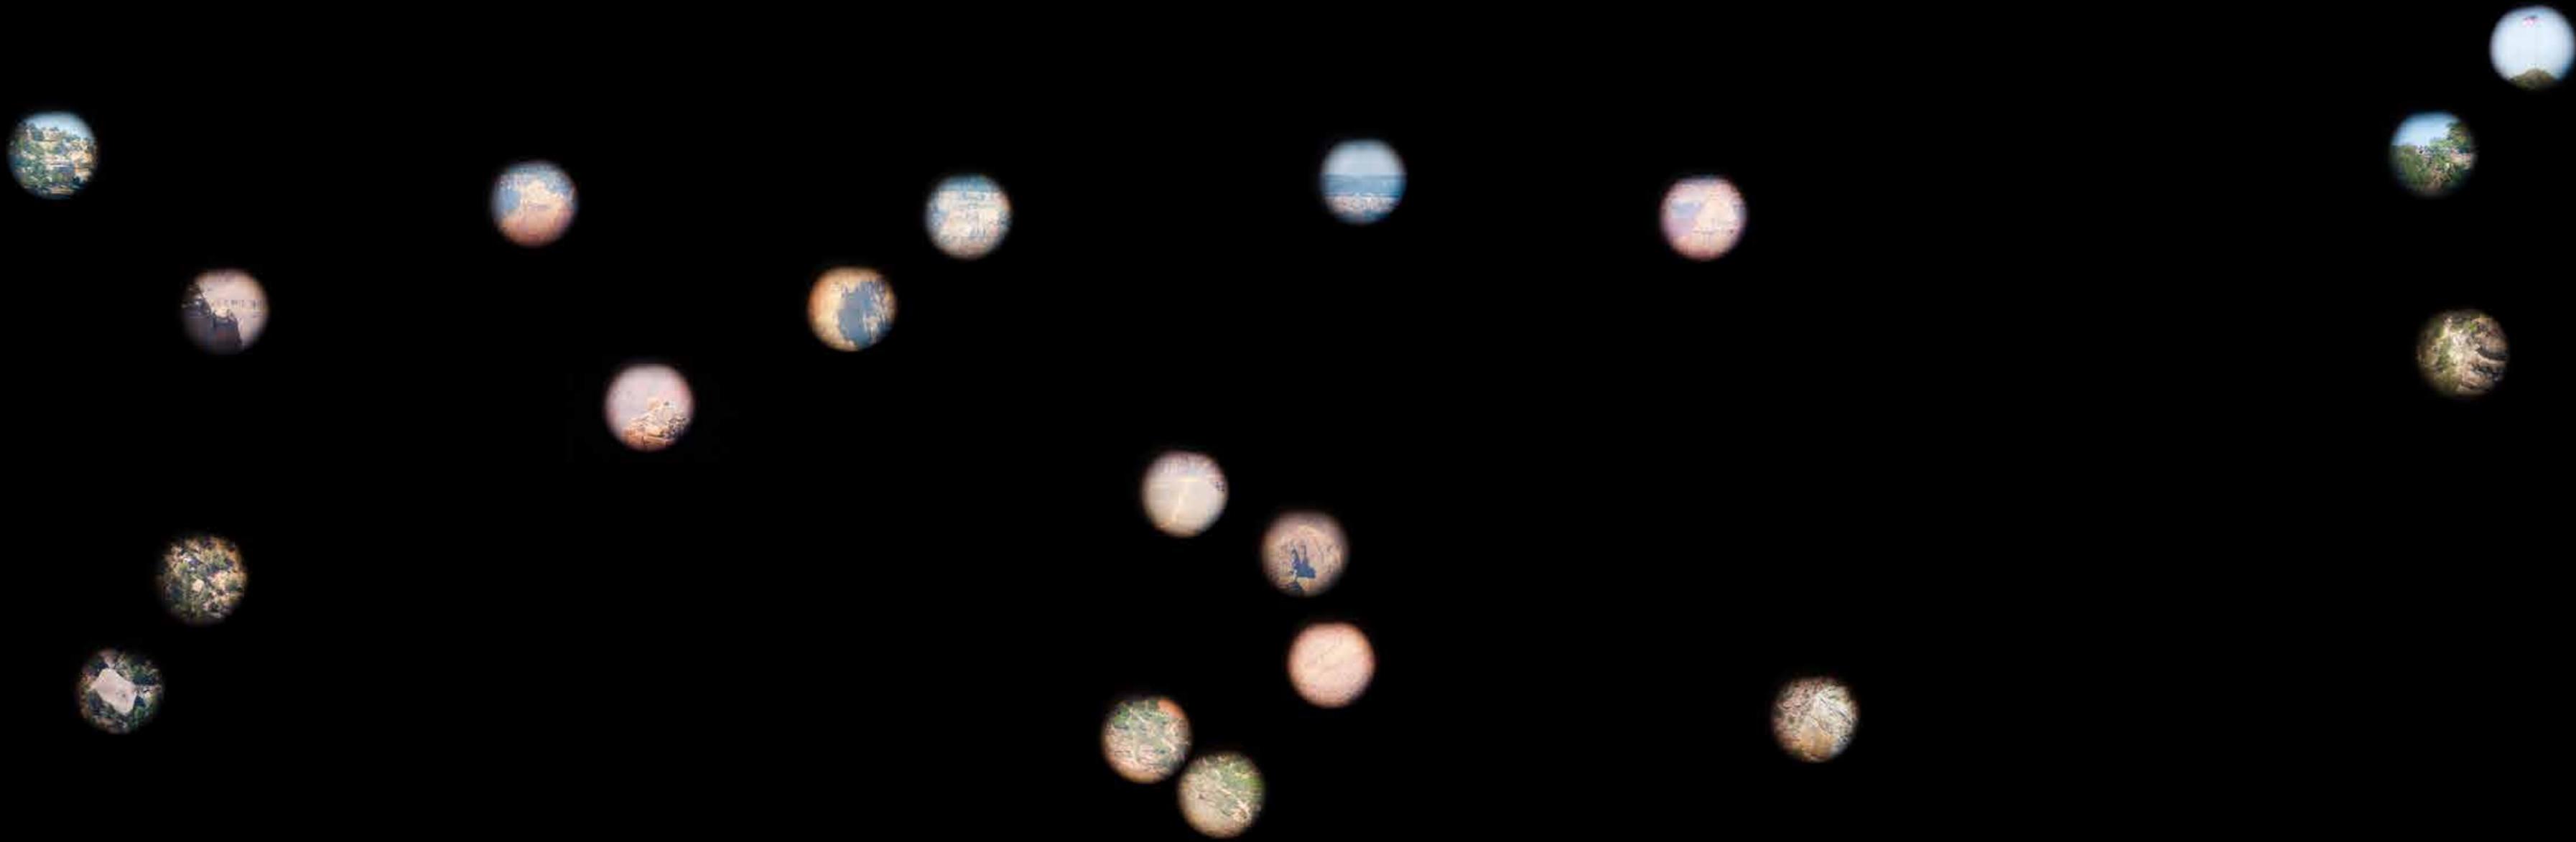

With those heady goals in mind, it is with great pleasure that the Center joins with the Phoenix Art Museum in support of *Reconstructing the View: The Grand Canyon Photographs of Mark Klett and Byron Wolfe*. Klett and Wolfe's dynamic exploration of the Grand Canyon relies on photographic archives, which preserve and make accessible images from our collective history, for the creation of their new works of art. Indeed, the artists have a long working relationship with the Center, using this collection of photographic images. In their artistic production, they bring existing images into a new dialogue. This way of working invigorates the archive and encourages continued investigation.
